

Monthly Inflation Review • September 2021

According to official statistical data, in September this year the inflation rate decreased by 0,1 percentage points (p.p.) and compared to August amounted to 0,4%. The stabilization of prices for foodstuffs (fruit and vegetables) resulted from abundant autumn harvest and increase in supply, as well as anti-inflationary monetary policy and stable situation in the domestic foreign exchange market.

The prevailing inflation rate was mainly caused by increase in prices for imported non-foodstuffs by 0,5% (share to inflation by 0,2 p.p.) and the cost of paid services to the population by 3,3% (0,5 p.p.). At the same time, this month decrease was observed in prices for foodstuffs, amounting to -0,5 percent (-0,3 p.p.).

The increase in prices and tariffs on services in the reporting month was mainly due to non-monetary factor, mainly owing to increase in prices for transport services by 9,5% (especially for public transport services by 11,1%, increase in fuel prices in previous months) education 7,5%, catering 0,6% and household 0,4%.

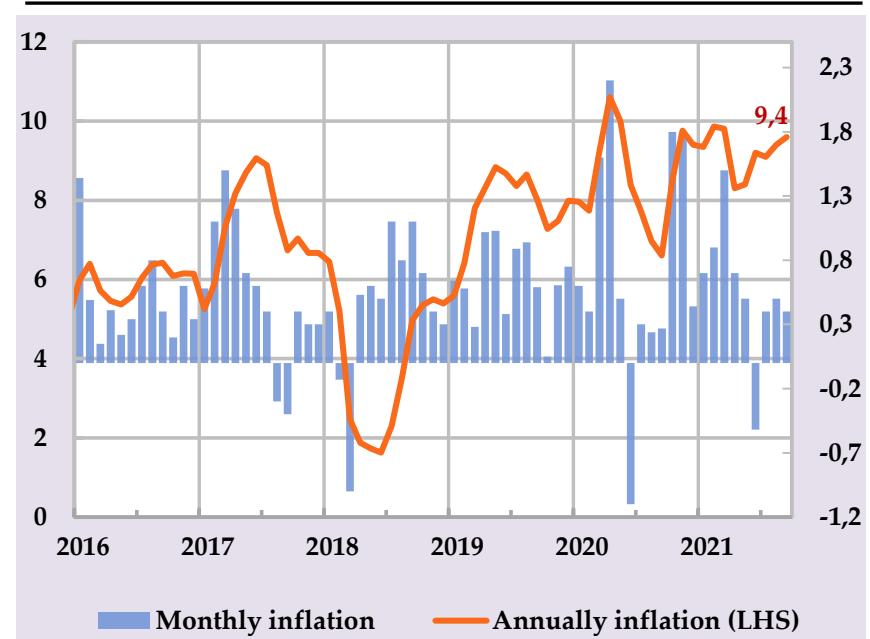

In non-foodstuffs sector in September this year, the great increase was observed in prices for fuel by 0,6% (especially for diesel fuel by 2,7%), medicines by 0,7%, clothing and footwear by 0,3%.

In food stuffs sector, due to the balance in supply and demand for agricultural products in domestic markets, prices for consumer goods, that has a significant share in the consumer basket, showed a decline in such products as rice 1,1%, eggs 4,8%, cotton oil 3,0%, sunflower oil 2,5%, apples 11,1%, grapes 25,5%, carrot 25,5%, cabbage 9,4%, etc.

Annual inflation rate in September 2021 amounted to 9,6%, which is 3,0 p.p. higher than in the same period last year. It should be noted that price change was facilitated by non-monetary factors, in particular, supply factors, seasonal and external pressures and on the basis of "basic effect".

The core inflation rate, partially reflecting monetary factors, in September this year amounted to 0,1% and reached 1,7% per annum. This process was mainly facilitated by increase in prices for non-food stuffs and ready-made food products.

The National Bank of Tajikistan will continue to pursue a balanced monetary policy with the aim of removing additional pressures on inflation and achieving the projected target by the end of the year.
